The Benefits of a Stand Up Wheelchair

The benefits of using a stand up wheelchair are enormous –medical publications have documented the benefits of using a standing wheelchair for many years and all medical professionals view these chairs as hugely beneficial to the recipient.

Psychological Benefits:

- **Increased Independence:**
- Simple tasks such as opening a high cupboard, writing on a white board, fishing, golfing, braaing The list is endless.
- **Social Status:** Ability to interact normally with peers and family. Anyone using a standing wheelchair will be able to do jobs in the home and workplace that previously they were unable to undertaken due to the restrictions of the chair.
- **Cognitive Abilities:** The increased circulation derived from standing increases a person's cognitive ability to think and their memory and focus becomes sharper.
- **Self Esteem:** Using a standing wheelchair increases your wellbeing tenfold. No more looking up at people or people looking down on you – finally the playing fields are level and eye to eye contact, stand up hugs, looking in a mirror etc are all fully accessible.

Physical Benefits

- **Pressure Sores:**
- One of the major benefits is the weight distribution which improves the healing of existing pressure sores and unquestionably is a preventative measure against any sores occurring .
- **Muscle Spasms/ Contractures:**
- Standing helps relax the muscles and reduces spasticity. It also stretches and exercises muscles.
- **Circulation:**
- Increased circulation as the body changes posture. Blood flow is returned to normal.
- **Bowel Function/Urinary Tract Infections:**
- Studies have proved that using a standing chair reduces the incidence of urinary tract infections and increases bowel function.

All the above are just *some* of the benefits derived from using a standing wheelchair on a regular basis.
